Dear Madam,

I am writing to kindly request an **email confirmation** and a **digital signature** from you, regarding our recent research. As we are working remotely, an email confirmation will serve as official documentation as we agreed.

To confirm, the discussed materials of our meeting on 22nd of February 2023 are attached with the email below. I would be grateful if you could confirm the above. Please let me know if there are any revisions or additional details that you would like me to add.

Thank you for your attention to this matter. I look forward to receiving your confirmation soon.

Best regards,
K.A Imasha Maduwantha

3.Jira Board

This screenshot shows the Jira Software Backlog for the 'Ayur_Minds' project. The interface includes a left sidebar with navigation options like Timeline, Backlog, Board, Reports, and Issues. The main area displays a list of tasks for 'AYUR Sprint 1' (17 Jul - 31 Dec) with 19 issues. Each task is represented by a card showing its title, progress bar, status, and assignee.

Task ID	Task Description	Progress	Status	Assignee
AYUR-24	Signup screen implementation	0m	PEER-REVIEW	[User]
AYUR-23	Welcome page implementation	0m	PEER-REVIEW	[User]
AYUR-8	Initial Authentication Service	0m	DONE	[User]
AYUR-22	Creating the Top Navigation Bar	0m	PEER-REVIEW	[User]
AYUR-9	UI/UX Designs	0m	IN PROGRESS	AM
AYUR-6	Initial Backend	0m	DONE	[User]
AYUR-12	API to save, update and delete content inside the social network	0m	DEV-TESTING	[User]
AYUR-13	API to search related content by keywords	0m	DEV-TESTING	[User]
AYUR-14	API to search related content by filtration	0m	DEV-TESTING	[User]
AYUR-15	Extracting associated disease and treatment entities based on natural language processing	0m	IN PROGRESS	[User]
AYUR-16	Scheduled service to update existing the Knowledgebase	0m	TO DO	[User]
AYUR-17	User interfaces implementation	0m	IN PROGRESS	[User]

This screenshot shows the Jira Software Board for the 'Ayur_Minds' project, specifically for 'AYUR Sprint 1'. The board is organized into four columns: IN PROGRESS, TESTING 2 OF 5, PEER-REVIEW 4 OF 4, and DONE 1 OF 5. Each column contains task cards with their titles, IDs, and assignees. The 'IN PROGRESS' column has 7 issues, while the other columns have fewer.

Column	Task ID	Task Description	Assignee
IN PROGRESS	AYUR-30	Adding Redux for the store management in the mobile frontend	[User]
	AYUR-31	Creating the API gateway in frontend side	[User]
	AYUR-24	Signup screen implementation	[User]
	AYUR-23	Welcome page implementation	[User]
	AYUR-22	Creating the Top Navigation Bar	[User]
	AYUR-21	initiate mobile app frontend	[User]
	AYUR-25	Mobile Login screen implementation	[User]

AI systems. [2] The chosen technologies for implementation included React Native, Expo, Python, TensorFlow, and a Node Server. These technologies facilitated the development and deployment of the chatbot, ensuring a user-friendly experience for individuals seeking personalized solutions and guidance through text.

The effectiveness and performance of the chatbot were evaluated through rigorous testing and user feedback. Evaluations focused on assessing the chatbot's ability to accurately understand user queries, provide suitable treatment suggestions, and deliver general healthy lifestyle recommendations. Refinements and optimizations were made based on the evaluation results and user feedback to enhance the chatbot's performance and user satisfaction.

Throughout the research, ethical considerations were prioritized. Data privacy regulations and ethical guidelines were strictly followed to ensure the protection and confidentiality of user data. Informed consent was obtained from participants involved in user testing and interactions. Measures were implemented to safeguard sensitive health information and ensure the ethical use of the developed chatbot.

By following this methodology, an Ayurvedic-based AI chatbot was developed, incorporating NLP technologies, a comprehensive knowledge base, and machine learning algorithms. The chatbot aimed to assist users in identifying suitable Ayurvedic therapies and medicinal herbs based on their symptoms, as well as provide general healthy lifestyle recommendations.

B. Image Identification

the basis for training the machine learning model, which can utilize Neural Networks for classification. The trained model is tested and evaluated using separate datasets, with performance metrics such as accuracy, precision, recall, and scores being used to assess its effectiveness.

Once the model has been successfully trained and evaluated, the system is deployed to make it accessible to users. The technologies utilized include React Native, Python, Expo, Node Server, and Google Map integration for mapping the herbal plant locations. Also Auto Machine Learning is incorporated to make it easier to add new plants. The methodology presented in this research paper builds upon existing studies that have focused on plant recognition using image processing and machine learning. It addresses the specific challenge of identifying ayurvedic medicinal herbs for treating non-communicable diseases, while also incorporating geographic mapping and giving the ability to add new plants easily using auto machine learning.

C. Social Network

Fig. 3. System architecture diagram of Social network.

The proposed community-based QA social network implementation consists of several features. Ask questions, post articles, add comments, and user preferences. User preferences include handling user sessions and desired topic management. Users can follow any desired topic and get personalized recommendations through social network homepages and notifications.

To improve user experience, the proposed implementation
