Hello,

The following submission has been created.

Track Name: Health Care and Assistive Technologies

Paper ID: 283

Paper Title: The Future of Ayurveda: Harnessing the Power of Artificial Intelligence for Personalized Treatment and Diagnosis

Abstract:

The rapid and busy nature of contemporary living often results in an uneven distribution of daily activities, inadequate dietary habits, insufficient physical exercise and leisure time, and excessive work-related stress, leading to poor health and dissatisfaction. At the same time, Ayurveda provides alternative solutions for many diseases. However, people may need help identifying the appropriate herbs and treatments and consulting with doctors promptly and cost-effectively. Additionally, the high cost of Western medicine may be a barrier, and not all illnesses are treatable. This paper aims to provide recommendations to patients through a chatbot, identify herbal plants and their locations, create a connection between doctor and patient, a doctor recommendation system, and a social network that facilitates the society to discuss ayurvedic matters. This assists users in discovering interactive Ayurvedic-based treatments for various symptoms. This solution is anticipated to benefit those seeking alternatives to conventional medicine.
